

PACE® ANALYTICAL EZSOIL® TRANSFORMING SOIL TESTING

PATENTED TECHNOLOGY FOR EFFICIENT, PRECISE, AND ECO-FRIENDLY SOIL TESTING AND ANALYSIS.

The Pace® team is dedicated to achieving maximum efficiency by increasing productivity, reducing turnaround times, improving quality, and minimizing our carbon footprint while maintaining the reporting levels achieved using the bisulfate analysis.

The ezSoil® Agilent GC/MS equipment can conduct VOC analysis by EPA Method 8260 from a single Volatile Organic Analysis vial with Methanol (MeOH). This not only saves time in the field, but also minimizes the need for dilutions and reduces data quality review time.

CUSTOMER TESTIMONIALS FOR EZSOIL® – DISCOVER WHAT THEY HAVE TO SAY!

"For large scale projects, it will definitely be my go-to."

"The reports are very easy to read and transfer to our tables."

"The first day we went from 8AM-630PM... having only 1 vial for VOCs and 2 for TPH, was definitely a big help, otherwise we would have had to consider an extra day for drilling."

BENEFITS

- Decreased Time in the field
- Fewer containers
- Less cooler weight
- Hold time extended from 48 hours to 14 days
- Better analytical results (less dilutions)

VOC EPA 8260 BY EPA 5035

- One Methanol 40ML Vial
- 14 Day Hold Time
- 5 Grams of Soil

PACE® WORKS IN PARTNERSHIP WITH YOU

Pace® makes the world a safer, healthier place. We partner with clients to provide the service, science, and laboratory data needed to make critical decisions that benefit us all. Through a nationwide laboratory network, Pace® advances the science of businesses, industries, consulting firms, government agencies, and others. More at PACELABS.com.
