

STARTING FROM SCRATCH

REGULATORY CONSULTING

CHALLENGE

A start-up chemistry company developed a novel chemistry for the green market. While they have plenty of expertise in their field of chemistry, they did not have knowledge of complex regulatory requirements necessary to bring their product to market. Since they are a start-up company, they are simply unable to make the cost commitment to a full-time, experienced regulatory employee at this time.

RESPONSE

The company partnered with Pace[®] Regulatory Services to act as their regulatory compliance experts. Pace[®] provided the SDS authoring and label text, new chemical registration assistance, testing recommendations and data interpretation. They helped with REACH dossier preparation, which will allow the company to sell in the European Union, as well as site permitting, DOT permitting, DHS support and more.

RESULT

Pace[®] navigated this client through the launch of their products and jump-started their regulatory program. Pace[®] is still available to them for ongoing issues as they arise.
