

# MANAGING DYNAMIC DATA

## RAW MATERIAL DATA MANAGEMENT

### CHALLENGE

A large chemical company was looking for a more proactive and efficient way to manage their supply chain regulatory data without burdening their upper-level regulatory employees. This is a company with thousands of raw materials who continuously adds new vendors, reformulates and develops new products, and makes acquisitions.

### RESPONSE

Pace<sup>®</sup> Regulatory Services worked closely with the client to define a customized process to collect, validate and organize their data. To ensure quality and consistency, Pace<sup>®</sup> implemented standard operating procedures (SOPs) and quality control measures validated through their ISO 9001:2015 quality system. Pace<sup>®</sup> continues to work both on-site and off-site to manage and maintain this proactive regulatory process, providing the client with monthly metrics to ensure that deliverables are met. With hundreds of vendor contacts and established SOPs, this team operates accurately and efficiently.

### RESULT

The client's raw material data management is now handled in a cost effective, proactive manner, allowing their employees to focus on core regulatory activities. This vital information is available at the client's fingertips in a way that is useful for them.
